BASANI GANESH

SOFTWARE ENGINEER — SOFTWARE DELIVERY — TESTING & INTEGRATION

+91 7386895943 ganeshbasani43@gmail.com github.com/Ganeshbasani linkedin.com/in/ganeshbasani/

PROFESSIONAL SUMMARY

Computer Science and Engineering graduate with software development internship experience and hands-on project experience in **software development, testing, debugging, integration and deployment workflows**. Experienced in Python, SQL, REST APIs, database operations, Docker and CI/CD. Built applications involving automated testing, backend services, data processing, health checks and deployment validation. Familiar with software development lifecycle practices, defect investigation and version control. Seeking an entry-level software engineering opportunity focused on software delivery, integration, testing and release quality.

TECHNICAL SKILLS

- **Programming:** Python, SQL, Bash/Shell
- **Software Engineering:** SDLC, Software Testing, Debugging, Defect Investigation, Troubleshooting, Documentation
- **Backend & Databases:** Flask, FastAPI, REST APIs, MySQL, PostgreSQL, Database Operations
- **Tools & Deployment:** Git, GitHub, Linux Fundamentals, Docker, GitHub Actions, CI/CD, AWS
- **Currently Learning:** Embedded C Fundamentals, ECU Software Integration, Automotive SPICE (ASPICE), Requirements Traceability, Software Release Planning

EXPERIENCE

Software Development Engineer Intern – Bluestock Fintech **[FEB 2026 – APR 2026]**

- Developed Python backend modules, SQL workflows and REST APIs to support application functionality and database operations.
- Performed testing, debugging, troubleshooting and code-level validation using Git/GitHub development workflows.
- Contributed to database and backend optimization work associated with an approximately **35% improvement in query-response performance**.
- Supported code reviews, software validation and collaborative development tasks with a focus on reliability and maintainability.

PROJECTS

- **Cloud-Native CI/CD Deployment Platform** **[Python, Flask, Docker, Jenkins, Terraform, AWS]**
  Engineered a repeatable delivery workflow spanning automated testing, container builds, vulnerability scanning, Amazon ECR image publishing, Terraform-based infrastructure provisioning and EC2 deployment through AWS Systems Manager. Integrated Pytest validation, Trivy security scanning and post-deployment health checks; built a deployment dashboard exposing build, pipeline, environment, version, deployment and runtime information.
  Added deployment-status and log visibility to support failure investigation, release validation and repeatable cloud deployments.
- **AI-Powered Ticket Routing & SLA Breach Prediction** **[Python, Flask, Random Forest, Pytest, Docker]**
  Developed REST APIs for ticket creation, management, routing recommendations and Random Forest-based SLA-breach risk prediction, with prediction history and analytics for ticket-level traceability.
  Implemented authentication, role-based access, input validation, audit logging, request IDs, health/readiness endpoints and GitHub Actions-based continuous integration.
  Recorded **42 passing automated tests** in a previous test run; project notes also report a **30% reduction in ticket assignment delays**.
- **Smart Attendance System — AttendX** **[Python, FastAPI, PostgreSQL, OpenCV, Docker]**
  Built a full-stack attendance platform with authenticated REST APIs, role-based access control, PostgreSQL persistence, database migrations and attendance analytics for daily, monthly and yearly reporting.
  Integrated face-verification and multi-frame validation workflows using computer-vision components; added containerization and CI workflows to support testing, integration and deployment.
  Earlier project notes report **35% higher attendance-processing accuracy** and **40% less manual administrative effort** through workflow automation.

EDUCATION

- **B.Tech – Computer Science & Engineering, Avanthi Institute of Technology (JNTUH)** 2022 – 2026
  CGPA: **8.03**
- **Class XII – Sri Chaitanya Junior College (TSBIE)** 2020 – 2022
  Percentage: **86.6%**
- **Class X – Brilliant High School (TSBSE)** 2019 – 2020
  CGPA: **10.0**

LEADERSHIP & ACTIVITIES

- **Pega Hackathon** – Participated in a collaborative technical problem-solving event, contributing to solution development, logical analysis and implementation. Gained practical exposure to teamwork, idea evaluation, iterative problem-solving and translating requirements into technical solutions.

ACHIEVEMENTS & CERTIFICATIONS

- **TCS CodeVita Season 13 – Global Rank 1509** – Achieved a global rank of **1509** in a competitive programming contest, demonstrating algorithmic thinking, data structures, logical reasoning and problem-solving under time constraints.
- **IBM DevOps Certificate** – Learned core DevOps principles, software delivery practices, automation concepts, CI/CD workflows and collaboration between development and operations teams.
- **AWS Cloud Services – Coursera** – Studied cloud computing fundamentals, AWS infrastructure concepts, core cloud services, scalability, security fundamentals and cloud-based application deployment.
- **Deloitte Australia Cyber Job Simulation – Forage** – Completed a virtual job simulation in September 2025, gaining exposure to cybersecurity-related tasks, analytical problem-solving, risk awareness and structured technical assessment.
